

CO₂ Cooling:

Find out about all the craze of CO₂ Cooling and how this revolutionary treatment can transform your skin.

Let's start with the biochemistry:

The cool lifting treatment uses a non-invasive administration of active ingredients by means of CO₂ delivery, pulsing at high pressures but low temperatures. This allows for maximum absorption opportunity of any solutions used during treatment. When the carbon dioxide hits the bloodstream, it alters the skin's natural pH creating a biochemical response. It increases circulation, stimulates lymphatic drainage, and creates a carboxytherapy process creating oxygen within the skin tissues by means of removing carbon dioxide, please note this is different to oxygen treatment.

What's great is CO₂ can give advanced results to the face, neck and décolleté areas as well as the body.

CO₂ Cooling including microneedling and advanced exosomes infusion price £250

Our CO₂ with exosome treatment is an advanced luxury, powerful combination of techniques in conjunction with the use of revolutionary exosomes.

This treatment is tailored completely to your skin goals, needs and suitability.

The treatment includes a gentle, light blend of microneedling with revolutionary, approved exosome infusions. Our exosomes originate from advanced scientific Korean stem cells and growth factors. This advanced treatment gives instant and progressive visible results and is designed to regenerate, replenish, hydrate, repair and rejuvenate the skin from the inside out.

Your treatment includes:

- Gentle microneedling which creates micro-channels in the skin that allows for deeper absorption of the active exosome ingredients applied. The microneedling is designed to create a controlled healing response within the skin.
- Once the skin is prepared, we then apply the remaining concentrated exosomes and this is then delivered using CO₂ Cooling technology with a further topical targeted infusion. These exosomes and infusions are rich in regenerative peptides and growth factors that deliver hydration, deep skin repair and calm inflammation. The exosomes also help stimulate collagen and elastin synthesis, reduce redness and sensitised skin, smooth fine lines and improve texture. Visible results with a firmer, restored, radiant complexion that makes the skin look more youthful.

Ideal for:

- Dehydration
- Dull, lack lustre skin
- Uneven texture
- Pigmentation
- Collagen boosting and elastin synthesis
- Early signs of ageing
- Promotes firmer, more youthful-looking skin.
- Help to reduce puffiness and darkness under eyes

What's great is it's give noticeable results and there is minimal to no downtime. Achieving long lasting results and is suitable for most skin types.

Consultation required for all treatments. Prices subject to change.

CO₂ Cooling including microneedling with a personally selected advanced skin boosting infusion £135

The benefits of CO₂ Cooling with the use of advanced skin boosting infusions are endless. What's great is this treatment is suitable for most skin types and has so many benefits to your skin, even after just one treatment.

Your treatment includes:

- Gentle microneedling which creates micro-channels in the skin that allows for deeper absorption of the active infusion booster applied. The microneedling is designed to create a controlled healing response within the skin.
- Once the skin is prepared, we then apply a further highly concentrated topical infusion of combined active ingredients and this is delivered using CO₂ Cooling technology. These infusions are a rich mesotherapy formula that are minimally invasive, which will deliver directly into the skin (mesoderm) to treat a number of conditions, largely related to skin rejuvenation. The infusion's often include a combination of transdermal peptides, proteins, minerals, hyaluronic acid, vitamins, amino acids, enzymes and other advanced active ingredients depending on the selected formula. Visible results with a firmer, restored, radiant complexion that makes the skin look more youthful.

Ideal for:

- Skin Rejuvenation
- Improved texture of the skin
- Collagen boosting and elastin synthesis
- Promoting firmer, more youthful-looking skin.
- Revitalising and hydrating effect
- Cell renewal and growth of new skin cells.
- Skin vitality and glow
- Great for skin that lacks firmness, hydration and radiance or presence of age spots and fine lines.
- Help to reduce puffiness and darkness under eyes

Both CO₂ treatments can be purchased as part of a course, please contact us for more information.

Topical anaesthetic is not required due to gentle nature of this particular type of microneedling included in these services. Consultation required for all treatment. These are our current prices but can be subject to change. CO₂ Cooling can be added to other suitable services too

Consultation required for all treatments. Prices subject to change.
